

Business Data Analysis Project

Overview

This project analyzes a real-world business dataset to extract meaningful insights and clearly explain the patterns and trends found within it. It was completed as the **Final Project** of the Data Analysis Internship at **SoftGrowTech**.

Objective

- Analyze a real-world dataset (sales/business data)
- Generate insights using charts and visual reports
- Clearly explain patterns and trends found in the data

Tools & Technologies

- Python
- Pandas
- Matplotlib / Seaborn
- Jupyter Notebook

Dataset

Dataset sourced from [Kaggle](#) – Superstore Dataset.

Steps Performed

1. Loaded and explored the dataset using Pandas
2. Cleaned data (handled missing values, fixed data types)
3. Performed exploratory data analysis (EDA) across sales, profit, region, and category
4. Identified key patterns and trends in business performance
5. Created visualizations (bar, line charts) to present findings clearly

Key Insights

- *(Add 2–3 insights after completing analysis)*

Sample

Visualizations

(Add screenshots of your charts here once generated)

Outcome

This project helped strengthen skills in end-to-end business data analysis – from cleaning raw data to presenting clear, structured, and actionable insights.

Connect

Project completed as part of the **SoftGrowTech Data Analysis Internship** – Final Project.
