

Interactive Data Dashboard

Overview

This project creates an interactive dashboard that visualizes data using graphs and charts, helping users understand the underlying data easily at a glance. It was completed as the **Final Project** of the Data Analysis Internship at **SoftGrowTech**.

Objective

- Build a dashboard that visualizes key metrics using graphs and charts
- Make the dashboard easy to understand for any user, not just technical audiences
- Combine multiple visualizations into a single, cohesive view

Tools & Technologies

- Tableau
- Python (Pandas, Matplotlib/Seaborn) for supporting analysis

Dataset

Dataset sourced from [Kaggle](#) –
IBM HR Analytics Employee
Attrition Dataset.

Steps Performed

1. Loaded and cleaned the dataset
2. Explored key metrics (attrition rate, department, income, job satisfaction)
3. Built individual charts/sheets for each key metric
4. Combined all visualizations into a single interactive dashboard
5. Added filters/interactivity to make the dashboard user-friendly

Key Insights

- *(Add 2–3 insights after completing analysis)*

Dashboard Preview

(Add a screenshot of your final dashboard here)

Outcome

This project helped strengthen skills in dashboard design and interactive data visualization – turning raw data into a tool that non-technical users can explore and understand easily.
